DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,5,6,7 and10 are rejected under 35 U.S.C. 102(b) as being anticipated by Genung et al. (US Patent 5,758,514). Genung discloses a direct expansion geothermal heat pump cooling/heating closed system comprising: a scroll (variable) compressor/pump (30), an oil separator (see column 7, line 21), an in-ground heat exchanger (5) and an indoor heat exchanger (41).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 14 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Genung et al in view of Wiggs et al (US Patent No. 5,816,314). Genung disclose the claimed invention as stated above but lack a heat exchanger situated within a dry deep well. Wiggs teach a geothermal system consisting of a in-ground heat exchanger situated within a deep dry well. It would have been obvious to one of ordinary skill in the

art at the time the invention was made to utilize a deep well in-ground heat exchanger to eliminate the necessary large space requirement.

Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Genung in view of Wiggs as applied to claim 14 above, and further in view of Singleton, Jr. et al (US Patent No. 4,448,238). Singleton teaches a deep well partially dry and partially wet system. It would have been obvious to one of ordinary skill in the art at the time the invention was made to made an in ground system heat exchanger being partially dry and wet for the purpose of improving the efficiency of heat transfer.

Allowable Subject Matter

Claims 12,13 and 18-20 are allowed over the prior art of record.

Claims 2-4,8,9,11 and 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
